

Critical Event Monitoring & Alerting

Pairing Elite Analysts with a Powerful AI Platform

Organizations are finding it more difficult to assess and manage risk in today's world. Companies with a large, global footprint are even more challenged to keep their people, property and assets safe. G4S' Critical Event Monitoring & Alerting service is designed to deliver relevant and actionable information that empowers security professionals to lower their organization's risk profile.

Operating out of the G4S Risk Operation Center (ROC) in Jupiter, Florida, our Critical Event Monitoring & Alerting service consists of two key elements to provide value to our clients. The first is our team of elite analysts, many of whom have advanced degrees and several years of local, state or federal law enforcement, military and private-sector experience.

The second element is an unmatched artificial-intelligence-driven platform developed by our partner Stabilitas. A true differentiator, the platform interprets data from 15,000 sources with fine-tuned accuracy within seconds. The result is actionable intelligence delivered to you and your teams that's faster, more accurate and tailored to better project the entirety of your organization
