

OnSight

G4S OnSight is a cost effective solution for video surveillance, theft deterrence and response. It targets key areas while creating a virtual security perimeter. Solutions can be customized depending on the incident detected to alert authorities, alert on-site staff or contact patrol services. Monitoring can help minimize risk to people and property from security threats such as a breach in a customer’s perimeter, entering restricted areas or loitering.

G4S OnSight is a remote video monitoring solution offered by the G4S Risk Operations Center (ROC). The ROC is the first global center to merge the management of risk intelligence services with remote video monitoring capabilities. Using advanced technology, a team of highly trained and experienced operators acts in real-time to protect your assets.

G4S OnSight can be deployed quickly as a pole mounted unit or trailer unit making it suitable for both permanent and temporary deployments. In addition, G4S OnSight can leverage your existing video surveillance equipment. The G4S OnSight pole mounted unit and trailer unit are both fully modular and customizable to meet even the most unique requirements. The pole mounted unit can be mounted anywhere with plug-in capabilities and be live for monitoring within minutes. The trailer unit is ideal for temporary use and is designed specifically with remote or undeveloped properties in mind, requiring no existing infrastructure or installation. Both types of units can withstand most weather conditions.

Product Features

24/7 video recording & live streaming video

Two-way speaker for live communication

Stationary & PTZ cameras

Advanced analytics

Strobe light & Siren

Thermal camera (optional)
